SC National Safety Council Consulting Services

Custom Solutions That Boost Your Bottom Line!

We tailor our services to meet your company's specific needs with proven solutions. We offer a broad range of services to meet all your safety needs and our consultants are Certified Safety Professionals and Certified Industrial Hygienists. Our Consulting Services include:

Regulatory Compliance Audits ("Mock OSHA Inspection")

Obtain an objective examination of your workplace and written programs to identify potential problem areas before OSHA does. Our safety professionals assess your current level of compliance and provide a detailed action plan to meet OSHA requirements.

Program Evaluation Services

We can review your current programs for OSHA compliance as well as real world effectiveness and develop new written programs that you may need. In addition, we can provide customized onsite training for employees and management.

Industrial Hygiene Services

Our experienced Certified Industrial Hygienists can conduct employee exposure monitoring for chemicals and noise, and indoor air quality testing for mold, moisture intrusion, carbon dioxide, formaldehyde, and volatile organic compounds that may affect employee comfort in the workplace. We can also provide respirator fit testing and training.

Ergonomic Assessments

Improve efficiency and comfort by letting us assess the workplace for ergonomic hazards. Our safety and health professionals can perform an ergonomics assessment of your facility, help you implement an ergonomics program and train your employees to manage the program.

Off-site Safety Director

A must have for small employers without a full time safety director on staff! We can help you manage your safety program by providing support staff on a monthly or quarterly basis to help you implement and manage your safety program. Industrial hygiene sampling and on-site training can also be provided as part of this service. Examples services that you may choose could be:

First Quarter: Baseline industrial hygiene sampling of the plant

Second Quarter: Mock OSHA Inspection and review of results with Safety Committee

Third Quarter: Review of written programs with guidance on any potential compliance issues

Fourth Quarter: On-site Hazard Communication training based on the chemicals used at your worksite.

For more information on any of these services, please contact Colleen Eubanks, OSH Program Director at 803-260-3202 or by email at ceubanks@scnsc.org.
